# Life in the fast lane

Meet Caleb. He studied electrical and mechatronic engineering at UniSA, which ignited his career in motorsport. During his degree, Caleb completed an internship with McLaren Technology in the US – a household name in Formula One. What happened next, set in motion a fast-paced career on and off the track.

McLaren saw real potential and a year later offered to sponsor Caleb's PhD at the University of Southampton in the UK. Through his research, Caleb explored how virtual environments and robotics could be used to accelerate learning for elite athletes. He worked with TeamBG (the British Olympic team) and UK Sport to develop simulators for extreme and elite sports, which ultimately lead to gold medal success at the Olympic Games.

Finding his lane, Caleb then went on to consult for UK Sport and the English Institute of Sport on rowing, sailing and cycling before joining McLaren Applied Technologies. This meant working for Fortune 500 companies on technical innovations before they entered the marketplace. Caleb ran the Data Science and Simulation Group, which solved complex problems by fusing machine learning and advanced simulation.

Caleb is now back on home soil working as a Director for Deloitte, leading a project called Optimal Reality – a game-changing software program that can simulate large networks like air traffic and ground transport.

The future of virtual reality, machine learning, simulation and robotics is on the rise. It's fundamentally shifting the way we do business, interact with each other and see our world. Career opportunities are endless – and some careers don't even exist yet...

***"Spend equal amounts of time building a good team and building your own career – people will follow you if you have their backs, and together you will succeed faster."***

## Careers feature

# A startup with heart

Building your own business can be a challenge. You have to be persistent. And nothing could be more true for UniSA business graduate and entrepreneur, Eric Peck.

After spending nine years in the Air Force and then as a management consultant helping some of Australia's biggest companies to solve complex problems, Eric decided to study an MBA and start his pursuit of finding more meaningful work.

It was this drive and his natural business ability that eventually found him tackling one of the greatest problems jeopardising global development and health equality.

Eric teamed up with robotics engineer, Josh Tepper, and together they launched Swoop Aero – a world-first, on-demand healthcare service that utilises drone technology to deliver medical supplies to communities in need.

After overcoming a few setbacks as a young startup, the dynamic duo landed their big break winning the first-ever competitive tender for medical supply delivery by commercial drone, contracted by the Vanuatu Government. Their hard work was fully realised when baby Joy received the first vaccine delivered by drone in the dangerously isolated village on Erromango Island.

Swoop Aero has since become a welcomed disruption for traditional health supply chains, proving that emerging technologies can transform the way the world moves essential supplies and in a very cost-effective way.

After three years in business, the company now has a logistics network across the developing world, and is leading the way in accessible healthcare.

The chaos of 2020 and the global health pandemic also put into perspective just how valuable their work is. Since the COVID-19 outbreak, the company has delivered 20,000 vaccine doses to the Democratic Republic of Congo and 1,500 face masks to Malawi, with more than 15,000 kilometres flown in a three-month period alone.

The sky's the limit for Eric and his team, with demands for better access to healthcare on the rise and continuing to soar.

*"What we're doing now is using leading-edge frontier technology to solve a massive problem. We get to have a big global impact with what we're doing and we're using technology to do it."*

Eric Peck  
MBA graduate  
CEO & Co-Founder of Swoop Aero
